

July 3, 2007

Representative Ruben Hinojosa
2463 Rayburn House Office Building
Washington DC 20515

Dear Representative Hinojosa,

Thank you for your leadership in introducing the *Graduation Promise Act (GPA)* to address the needs of America's high schools and ensure that every student graduates prepared for the 21st century.

An increasingly global, technologically-based economy is demanding ever higher levels of knowledge and skills from its workers. In a world in which a meaningful high school diploma has become the *minimum* qualification necessary to support a good job and family well-being, far too many American students are being allowed to fall off the path to prosperity. These problems have escalated to crisis proportions in thousands of the nation's high schools and are hampering the opportunities of millions of students.

Only about a third of the students who enter ninth grade each fall graduate four years later prepared for college or the contemporary workplace. Another third will leave high school with a diploma but without the skills and knowledge needed to succeed in college or the contemporary workplace. Another third will not graduate from high school within four years, if at all. For minority and low income students, the situation is even worse.

The cost of educational failure is borne by individual students, the rest of society, and the American economy. There is a well-documented earnings gap between high school graduates and dropouts, and a growing challenge for individuals with only a high school diploma to find stable, well-paying jobs. Individuals with less education are less healthy, die earlier, are more likely to become parents when very young, become embroiled in the criminal justice system, or take advantage of social welfare assistance from government and other agencies. And just as it has become clear that we must be able to compete even more aggressively abroad, there is mounting evidence that the nation's graduates and workforce are less and less prepared for the challenges and competition they face in the global economy.

To address the needs of the six million students most at-risk of dropping out; the 2,000 high schools known as dropout factories because they produce more dropouts than graduates; and the systemic needs of the American high school system, Congressman Hinojosa has introduced the Graduation Promise Act (GPA). The GPA, based on research and best practice, is designed to fulfill an appropriate federal role as part of a systemic approach to improving America's high schools.

The time is right for federal action. The educational reforms of the past decades have primarily focused on preparing children to learn through early childhood education programs and in providing intensive, targeted supports for students in the early elementary grades. The needs of the nation's secondary schools – and particularly of its high schools – have been ignored for far too long.

The civil rights interest in closing achievement gaps and improving academic outcomes for poor and minority students has converged with the business interest in keeping America's graduates and workers economically competitive. By appropriately extending its education focus to include the needs of students in middle and high schools, this legislation can help move the nation from "no child left behind" to "every child a graduate."

Sincerely,
